Part 2: Imaging & Diagnostic Scan Reports

26. Ultrasound Abdomen & Pelvis (USG) Report

Findings: The liver, gallbladder, spleen, pancreas, and both kidneys appear normal in size and structure. No abdominal masses, cysts, or ascites detected. Echogenicity is normal across all parenchymal organs.
Impression: Normal Abdomino-Pelvic Ultrasound.

27. Chest X-Ray (PA View) Report

Findings: Both lung fields are clear with no signs of focal consolidation, effusion, or pneumothorax. Cardiomegaly is absent, and the bony thorax is intact.
Impression: Normal Chest Radiograph.

28. Computed Tomography (CT) Brain Report

Findings: Brain parenchyma shows normal attenuation. No evidence of acute intracranial haemorrhage, large territory infarct, or space-occupying mass lesions. Ventricles and sulci are within normal biological limits.
Impression: No Acute Intracranial Pathology.

29. Magnetic Resonance Imaging (MRI) Spine Report

Findings: Vertebral body heights and alignments are well preserved. Intervertebral discs show normal signal intensity and height. No significant disc bulge, herniation, or canal stenosis visualized.
Impression: Normal Study of the Lumbar Spine.

30. Dual-Energy X-Ray Absorptiometry (DEXA) Bone Scan Report

Findings: Total lumbar spine (L1-L4) bone mineral density yields a T-score of -0.2. The right femoral neck yields a T-score of -0.1.
Impression: Normal Bone Density.
